Table of contents

Twenty (20) plus ways of viewing data in R	2
View entire dataset	3
Head and tail of the dataset	3
View the structure of the dataset	3
Dimensions (number of rows & columns) of the dataset	3
View column names	3
View the data type of each column	3
View the first 5 row of a particular column	3
View specific rows or columns	3
Get a summary of your dataset	3
Peek at the top and bottom of each column with <code>skimr</code> package	3
Check data type of columns with <code>sapply</code> function	3
Inspect the first few rows of a dataframe with <code>glimpse</code> from <code>dplyr</code> package	3
View unique values in a data frame with <code>unique</code> function	3
View frequency of each value with <code>table</code> function	3

Twenty (20) plus ways of viewing data in R

When data is loading into R,

View entire dataset

Head and tail of the dataset

View the structure of the dataset

Dimensions (number of rows & columns) of the dataset

View column names

View the data type of each column

View the first 5 row of a particular column

View specific rows or columns

Get a summary of your dataset

Peek at the top and bottom of each column with `skimr` package

Check data type of columns with `sapply` function

Inspect the first few rows of a dataframe with `glimpse` from `dplyr` package

View uniques values in a data frame with `unique` function

View frequency of each value with `table` function
