Hello and welcome — I am glad you are here.

My name is **Sang B. Mendy**, a mathematician turned data scientist from **The Gambia**, currently pursuing a **Master's degree in Data Science and Statistics** in Indonesia. My journey has taken me from the classrooms of the University of The Gambia all the way to Southeast Asia — and along the way, I have discovered that data, when truly understood, has the power to transform lives and communities.

What I Do

I sit at the intersection of **mathematics, statistics, and data science**. My work involves turning raw numbers into meaningful insights — through statistical modelling, machine learning, and data visualization.

My core tools are:

- **R** — for statistical analysis, visualization, and reporting
- **Python** — for machine learning and data manipulation
- **Quarto & R Markdown** — for reproducible research and documentation
- **MS Excel** — for quick data exploration and reporting
- **PowerBI**
- **Minitab**
- **SQL**

What This Website Is About

This website is my **open notebook** — a living record of everything I learn as a student, a researcher, and a data enthusiast. You will find:

- **Blog posts** — honest reflections on statistics, data science, and life as an African student in Asia
- **Tutorials** — step-by-step guides on R, Python, and statistical methods
- **Projects** — real analyses and research I have worked on
- **Resources** — the best books, courses, and tools I recommend

I believe that the best way to truly understand something is to teach it. So I write — not because I know everything, but because I am learning, and I want to bring you along for the journey.

My Story

I grew up in The Gambia with a love for mathematics — the precision of it, the elegance of it, the way a single equation could describe something vast and complex. That love led me to pursue a Bachelor's degree in Mathematics, which then opened the door to the world of data science.

Today, I am studying in Indonesia — thousands of miles from home, immersed in a new culture, a new language, and an exciting new chapter of learning. Living abroad has taught me things that no textbook could: resilience, adaptability, and the beauty of seeing the world through different eyes.

I believe that **where you come from does not limit where you can go** — and I hope this website is proof of that.

Currently

- Master's student in Data Science & Statistics in Indonesia
- Learning advanced statistical modelling and machine learning
- Building this website as a public learning journal
- Open to collaborations, research opportunities, and conversations about data

“The goal is not to be perfect. The goal is to keep learning.”
